

Lift Turntable

APPLICATION:

An Airfloat customer was experiencing an increase in medical claims for back injuries on an assembly line job dealing with parts shipped in layers of dunnage.

SOLUTION:

Airfloat manufactured a standard 4,000 lbs capacity lift table with a rotating top. The table has a down height position of 11" to load surface. The lift height with 24" of variable lift has a 35" load height position.

BENEFITS:

- Ergonomic positioning reduces risk of operator injury.
- Standard foot control is easily relocated to any position.
- Steel rollers top and bottom allow easy rotation of dunnage to reach all parts on each layer.
- Solid steel cross arms
- Steel nondetachable safety service block to hold lift in up position while being serviced
