

Three Position Racking Turntable

APPLICATION:

An Airfloat customer in an automotive stamping plant required a table that could present various size racks for end of line part racking and also be manually controlled at the operator station with height determined by the operator.

SOLUTION:

Airfloat designed a three position racking turntable with 14" pneumatic lift tables and pneumatic tilt tops. This option allows a 30 deg. tilt that is fully integrated into the top of each pneumatic lift so that a work height of approximately 14" can be maintained. The tilt function will be manually controlled by the operator similar to the pneumatic lifts.

BENEFITS:

- Three rack capacity allows press to run continuously.
- Totally pneumatic operation means easy installation and low maintenance.
- Fully integrated with press control to maintain production rates
