

Four Station Heavy Duty Tilt Turntable

**APPLICATION:**

An Airfloat customer needed a safe and effective solution to unload parts on the assembly line without causing harm to their employees. Operators found difficulty bending for parts in the upright position they were loaded in. This was not only time consuming, but also it was strenuous ergonomically.

SOLUTION:

Airfloat designed a four position tilt turntable that easily rotates racks into a safe unloading position. While operators are unloading parts, a fork truck can reload an empty lift in the aisle. This product also features a 30 deg. tilt on each table that lowers the panels into a shelf-like fashion, making them easier to maneuver.

BENEFITS:

- The tilt table reduces the risk of injury to the operator.
- A four station table decreases the demand on the fork truck operator.
- Racks can be easily rotated into position.
- The 30 deg. tilt creates an easier unloading position.
- Increased efficiency emptying racks results in increased productivity.
- Operates on plant air supply
- Total pneumatic power for low cost installation
- Provides a large ergonomic hand valve that can easily be relocated to the right or left hand standard. (Foot control valve is also available.)
